# THE KEY TO BETTER CASINO SECURITY

ASSETTRACK alerts casino security personnel when critical keys leave your facility. It's an affordable Radio-Frequency Identification (RFID) system that automatically notifies casino security personnel in real-time with an audible alarm and integrated LED lights when keys leave an employee exit/entrance. Designed to help ensure key policies and procedures are maintained 24/7, ASSETTRACK is also seamlessly compatible with leading key management systems, enabling a holistic key control system to better protect employee exits and back areas.

ASSETTRACK is plug-and-play and extremely cost-efficient.

It provides everything you need to prevent your keys from leaving your facility. Simply attach our highly durable RFID fobs to your key rings, install a pair of readers at each employee exit, and you're up and running. ASSETTRACK delivers extremely low Total Cost of Ownership (TCO) with no software to install, battery-free key fobs, and no recurring license fees. In fact, ASSETTRACK will quickly pay for itself by virtually eliminating duplicate key and lock cylinder rekeying costs.

ASSETTRACK delivers high ROI and low Total Cost of Ownership.
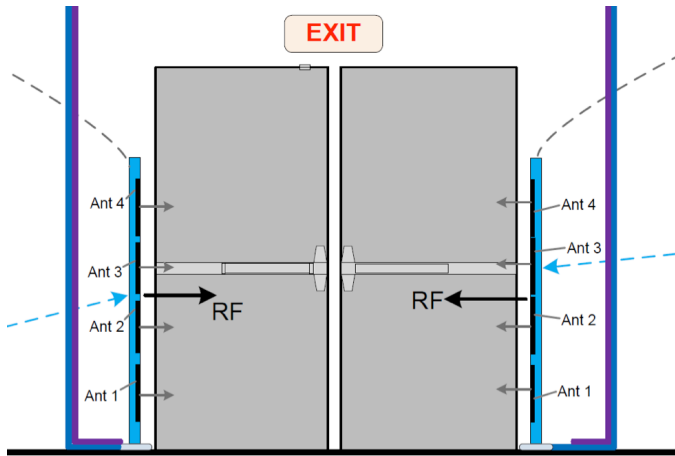

ASSETTRACK is an exit prevention system that utilizes passive RFID fobs to prevent sensitive assets from leaving your facility. This technology provides a superior system allowing us to utilize RFID fobs that do not require batteries and are maintenance free, drastically reducing your total cost of ownership. With an integrated Radio Frequency (RF) reader, utilizing Power over Ethernet (PoE), ASSETTRACK requires minimal installation. A plug and play application, simply mount and connect, reducing installation costs. All this makes ASSETTRACK significantly less expensive to operate and maintain when compared to other key exit prevention systems.

Pair of readers located at egress point

ASSETTRACK alerts casino security personnel when keys are mistakenly or intentionally leaving your facility with an audible alarm and integrated LED lights. ASSETTRACK'S unique key exit prevention capabilities virtually eliminate the high costs associated with re-keying locks due to keys leaving the facility, while maintaining tight security controls.

System Benefits

- Virtually eliminates costly rekeying expenses due to missing keys
- Increases overall security for employee exits and back areas
- Fast, easy installation via single cable connection for communications and power
- Flexible communications options supported
- No software required, no annual fees, and no ongoing maintenance costs
- Reduces cost of implementation for a full door read zone
- Low TCO with tangible ROI

System Features

- Fobs have no battery, are maintenance free, and have no end of life
- Versatile reader mounting configurations accommodate any egress point
- PoE single cable connection reduces installation costs
- WiFi (802.11b/g), RS232, cellular or direct Ethernet connectivity
- Master reader/antenna can drive a slave portal configuration
- Integrated side illuminating LED indicators
- 2 input, 2 output GPIO
- Options include: external relay, which allows for flashing strobe light, additional annunciator, and counter display

Readers and Antenna Features

- Read range up to 50 feet
- TCP/IP communications
- Integrated audible alarm and LED lights
- 44 ½" H x 11" W x 1" D
- 1 Watt GEN2 reader
- Built-in PIR motion sensors, 2 external inputs
- Programmable Edge LEDs
- 2 GPIO conditional outputs
- PoE, external 12VDC
- Slave portal can drive up to 4 additional antennas
- Multiple configuration options - standard single and double doors, as well as wall, edge, floor and chair rail configurations

Floor Mount   Wall Mount

RFID Key Fob Features

- HID RFID Fobs
- Durable, impact resistant
- Read range up to 30 feet
- No end of life – no batteries
- Size 3" x ¾" x ½"

You'll be up and running fast with ASSETTRACK!

Just send us pictures or diagrams of the entrances/exits where you want to install ASSETTRACK, and our sales engineers provide you with the specific configuration you need. Additional readers may be necessary to achieve the desired key exit prevention coverage you need based on building materials and configurations. You may also need to locate your key management/storage area for sensititve keys approximately 35 feet from installed ASSETTRACK readers to avoid false alarms.

When your new fully configured ASSETTRACK system arrives, you'll find that our unique plug-and-play solution is easy to install and implement right out of the box.
